

## Rife Conference 2003 Summary

The Rife Conference 2003 in Seattle was a whopping success with about 400 people attending. The exhibitors had their many types of machines on display, and there was even a Multi-Wave Oscillator to see, as well as a recreation of the late 1950's AZ-58 Rife Ray machine! The nutritional folks are starting to pay attention to the Rife Conference.

More detailed write-ups and photos are posted on [www.rifejournal.com](http://www.rifejournal.com).

**Jason Ringas:** Jason ran his history of Royal Rife videotape part 1 of 2, although I understand that there were additions to it from the version shown last year.

**Richard Loyd, PhD:** Dr. Loyd introduced a chest cancer survivor from Washington who spoke of beating her cancer using alternative methods. Dr. Loyd's main subject was "100 Years of Cancer Treatments" and went on to discuss the new findings of autistic babies with high levels of mercury and other metals in their baby hair – mercury from their mothers and possibly from vaccines. It would appear that most of us have a gene which helps expel the heavy metals (from wherever), but some don't, and may thus become autistic.

**Hulda Clark, PhD:** Started her talk by describing the early 1900's electromedical devices, and the crossing of technology of devices and their applications. Her "Science of Health" was an entertaining talk about using frequencies to help the body, building simple oscillators to use, etc.

**Carl Taylor, MD:** Dr. Taylor once again gave an excellent talk on the body's chemistry, of the importance of an alkaline pH level in the body (harder to maintain than one would think!) and various conditions that arise from incorrect levels of magnesium and other minerals. He also described measurements of far lower levels of lead, mercury, sodium and aluminum in organic wheat vs standard non-organic wheat and the importance of a good diet.

**Glen Curd:** Spoke on the "Marriage of electro-medicine, alternative medicine, and allopathic medicine for the purpose of healing and the maintenance of health" and "Leading people out of a suspended state of

sickness!" He noted that studies showed that a high percentage of colon cancer patients were type A with no appendix, and that just possibly the organ does indeed have uses necessary for the body.

**Peter Walker:** Peter, from the Rife Group in Germany, ran two videotapes on the new Ergonom 500 microscope, which features capabilities far in excess of what Royal Rife's Universal Microscope was capable of. With maximum magnifications of far over 10,000 times, the device can image live virus cells in many modes of operation. See [www.grayfieldoptical.com](http://www.grayfieldoptical.com) for their web site.

**George Gaborney:** President of the San Francisco Tesla Society – noted the founding of the Wellness Electronics Industry League, and introduced two of the individuals whose homes and offices were raided in the last year by armed agents of the FDA. (In one case, 7 flack-jacketed armed Federal Police essentially kept the person and a child captive all day while the FDA went thru the house, seizing 30+ boxes of materials, records, computers etc. and no charges have been filed). Attorney Jim Turner then described what actions the industry may take to regain their freedom to help protect health, and noted approximately 13,000 actions by the FDA or FTC and their agents in the last year against the alternative health industry. Another attorney described additional actions which may help restore health freedoms to Americans. Freedom Fighter Tim Bolen, and author/lecturer Dr. Len Horowitz then spoke, as did Frank Cuny, the head of Californians for Health Freedoms.

**James Bare, DC:** Spoke on "The Importance of Charge" and on the idea of electro-vitalism, that the cells require certain charges within them if they are to function correctly, and the concept that small voltages within the cell generate tiny magnetic fields, and that

these assist the movement of colloids and cell potentials. Accordingly, the application of frequencies, by whatever method, may have an advantageous effect on the cells of the body.

**Steven Haltiwanger, MD:** A very energetic speaker, Dr. Haltiwanger discussed cell biology and nutrition, and outlined the four chemical/nutrient compounds which every cell needed to help build or restore its health and immunity from attack.

**Henry Lai, PhD:** Always an interesting speaker, Dr. Lai covered his research in feeding malaria cells with various iron compounds, then using strong magnetic fields to negatively affect the organisms. He also displayed several studies showing the increased effect of various chemotherapy agents on patients exposed to strong magnetic fields, and that in mice, cancer-infected mice may survive twice as long when exposed to a 1000-gauss magnetic field vs. the unexposed mice. He then discussed Artemisia annua L. and its possible role as a cancer treatment. In addition, the compound was found to be fairly effective against malaria during the Vietnam War.

**Dave Felt:** An engineer, Dave discussed doing culture cell tests on the safe strain of *e.coli* using a Rife/Bare device, and displayed some results in slowing down the growth curve, and speeding up the death curves in *e. coli* cultures using the emissions from the frequency – modulated plasma lamps. The spectral energy outputs of the typically used gasses in plasma lamps was also displayed and discussed.

**Len Horowitz, PhD:** Dr. Horowitz discussed problems with the current health system, then covered some of the fine points in his "Healing Codes" book.

### Maintain Harmony with Min-Tran®

Min-Tran is a vegetarian calmativite that contains calcium and magnesium mineral complexes from kelp and alfalfa to promote emotional balance and maintain inner harmony. Calcium and magnesium work together to relieve feelings of agitation and promote an inner atmosphere of serenity. Contact the Standard Process Customer Service Department at 1-800-558-8740 for more information.
